

CourtEdge™ Reducers

SafePath™ Products offers the first 100% “green” edge treatment for athletic sport courts, including; portable basketball courts and permanently installed raised wood courts for the sport floor industry. **CourtEdge™ Reducers** are specifically fabricated to provide access solutions for inverted landings and built-up landing transitions at door entrances and at raised court floor edges.

The *only* product prefabricated for the architectural sport court industry, **CourtEdge™ Reducers** offer hundreds of design and height configurations for complying with federal, state and local access building code laws and regulations. **SafePath™** employs a design team of full service professionals to create your complete solution for transition fabrication for your installed sport floor. Whether it is an inverted landing or a raised court surface, **SafePath™** offers safe, durable and solid solutions for almost any access transition barrier.

CourtEdge™ Reducers provide a safe and easy transition from the playing surface to the original floor, reducing injury to athletes and spectators with this exciting new “green” slip resistant ADA compliant product. Installation is accomplished in minutes with a high-grade silicone adhesive.

CourtEdge™ Reducers are designed to be affixed to the vertical sides of hydrosopic flooring systems allowing for expansion and contraction of substrate flooring material.

New flooring material requires a transition of 12” to accommodate a 1” vertical barrier. This is referred as 1:12 slope which allows for compliance.

Whether it’s interior or exterior, **CourtEdge™ Reducers** will never freeze, crack, or splinter like other flooring transition products and never requires the use of mechanical fasteners.

CourtEdge™ Reducers can also be used to transition a newly constructed gymnasium floor to the original floor or surface.
